

Upgrade and Class renewal of Drilling Rig

General:

The work took place at Fayard's facilities in Denmark during the summer 2014. Class renewal and life time extension for this existing Offshore Rig involved a large number of different issues, covering e.g. Class remarks, updating and renewing arrangements and outfitting, mechanical equipment and working areas. KNUD E. HANSEN has assisted both Owner and Yard during design, preparation, execution and as-built documentation.

Scope of Work:

For the Owner:

Design and rearrangement of offices and recreation area, including extension of deck house

Design and rearrangement of galley, mess room and provision areas

Design and rearrangement of laundry and linen handling room

Design and arrangement of fire station and lifting gear stores on main deck level

Check of HVAC requirement due to extension of accommodation and location of fire dampers

Handling of Class contact and discussions on behalf of Owner

On site assistance during the yard stay

For the Yard:

Design and workshop drawings for drum rack

Design and workshop drawings for extension of platform in sack stores

Workshop drawings for new crane pedestal

Workshop drawings for extension of accommodation including external outfitting

Redesign of lifting fittings on delivered upper part of crane pedestal, including procedure and welding instructions

Lifting calculation and lifting instruction of existing crane pedestal

Workshop drawings for new container platform including FEM analysis

Design and workshop drawings for hose stores at loading station (manifold)

Bumper arrangement for cable protection

Workshop and other necessary drawing for refitting in SCR room

Drawing for redesign of lifting beam, including FEM analysis

Layout and FEM analysis for flush deck hatch

Handling of Class contact and discussions on behalf of Yard

As-built documentation for various other areas

On site assistance to production/workshops
